

(TR-104) PYTHON WITH AI/ML

Training Day 17 Report

Date: 3 February 2026

Topic Covered: Multiprocessing in Python

The seventeenth day of training focused on understanding multiprocessing in Python and how multiple processes can run simultaneously to improve performance. The day also included concepts of shared memory and inter-process communication.

- Created and executed multiple processes in Python.
- Understood the basics of multiprocessing and its advantages over single processing.
- Worked with shared memory using Array and Value.
- Implemented inter-process communication using Queue.
- Practiced handling data exchange between multiple processes.
- Revised basic concepts of asynchronous programming for better understanding of concurrency.
- Explored real-world use cases of multiprocessing for performance optimization.
