

(TR-104) PYTHON WITH AI/ML

Training Day 25 Report

Date: 13 February 2026

Topic Covered: NLP Concepts Assessment – Vectorization, Classification & Model Evaluation

The twenty-fifth day of training focused on assessing conceptual understanding of previously covered NLP topics including vectorization techniques, classification models, and evaluation metrics. The assessment was designed to strengthen reasoning and clarity of NLP fundamentals.

- Completed Google Form assessment covering NLP foundations and concepts.
- Evaluated understanding of vectorization techniques such as BoW and TF-IDF.
- Reviewed concepts of classification models including Naive Bayes and Logistic Regression.
- Strengthened understanding of NLP pipeline from preprocessing to prediction.
- Revised evaluation metrics including accuracy, precision, recall, and F1-score.
- Reinforced understanding of train-test-validation split methodology.
- Revisited concept of overfitting and model generalization.
- Strengthened awareness of limitations of classical NLP approaches.
- Improved conceptual clarity through reasoning-based assessment questions.
