

(TR-104) PYTHON WITH AI/ML

Training Day 5 Report:

Date: 16 January 2026

Topic Covered: Git Tasks, Slack & Notion

The fifth day of training focused on performing practical Git tasks and understanding the use of Slack and Notion in professional work environments.

Git Tasks:

- Practiced Git workflow through hands-on tasks and activities.
- Created a repository, added README.md, committed changes, and pushed the repository to GitHub.
- Worked on branching and merging using feature-update.
- Resolved merge conflicts using conflict-1 and conflict-2.
- Used commands such as git reset and git fetch, and learned when to avoid force push in team projects.

Slack:

- Learned how to join channels in Slack.
- Understood the difference between Channels and Direct Messages (DMs).
- Learned the purpose and usage of threads in conversations.
- Understood the difference between @channel, @here, and @username mentions.
- Learned how to share code snippets and logs using code blocks.
- Followed professional Slack communication etiquette.

Notion:

- Created a Project Documentation page in Notion.

- Used Notion templates for faster and organized documentation.
- Made the page public and enabled the “Share to Web” option.
- Learned the difference between private, shared, and public pages in Notion.
- A Notion task page was also created and published.
