

(TR-104) PYTHON WITH AI/ML

Training Day 6 Report

Date: 19 January 2026

Topic Covered: Python Basics, Datatypes & String Operations

The sixth day of training focused on practicing Python basic concepts, datatypes, conditional statements, and string operations through hands-on programming tasks.

- Practiced Python basic concepts and different datatypes including integers, floats, strings, and booleans.
- Implemented arithmetic-based programs such as area calculation, average calculation, temperature conversion, and simple interest calculation.
- Performed tasks related to conditional statements for comparisons, eligibility checks, leap year verification, and discount validation.
- Worked on string operations including concatenation, join(), and string slicing.
- Developed programs for greeting creation, sentence building, and formatted address generation.
- Implemented programs for initials extraction, reversing words using string slicing, and palindrome checking.
- Practiced the use of f-strings for personalized greetings, table formatting, and receipt generation.
- Multiple practice tasks were completed and uploaded to GitHub for documentation and version management.
