

(TR-104) PYTHON WITH AI/ML

Training Day 9 Report

Date: 22 January 2026

Topic Covered: Advanced Python Functions & Mini Projects

The ninth day of training focused on practising advanced Python concepts including functions, closures, lambda functions, built-in modules, and mini project development.

- Developed a Student Grade Tracker program using Python functions and data handling concepts.
- Created functions using *args and **kwargs parameters for handling variable inputs.
- Implemented closures for calculating and tracking average scores dynamically.
- Used lambda functions for modifying grade values.
- Practiced list comprehensions for filtering top-performing students.
- Used the built-in statistics module for average calculation and data analysis.
- Implemented global variable handling using the global keyword.
- Created a Fake Headline Generator using Python lists and the random module for dynamic headline generation.
- Developed a Word Guessing Game with different difficulty levels and word matching logic.
- Improved understanding of logical problem-solving and modular programming through hands-on mini projects.
