

(TR-104) PYTHON WITH AI/ML

Training Day 35 Report

Date: 27 February 2026

Topic Covered: AI/ML Workshop on Modern AI Technologies and AI Agents

The thirty-fifth day of training focused on attending an AI/ML workshop conducted at Indian Institute of Technology Delhi. The workshop covered modern AI concepts, NLP applications, AI agents, LangChain, and practical demonstrations of advanced AI systems.

- Attended an AI/ML workshop on modern Artificial Intelligence technologies and applications.
- Learned about the latest advancements in Natural Language Processing (NLP).
- Understood the role of Large Language Models (LLMs) in modern AI systems.
- Explored the concept of AI Agents and how they automate intelligent workflows.
- Learned about LangChain and its usage in building AI-powered applications.
- Understood how LangChain integrates LLMs with external tools, memory, and workflows.
- Learned about Retrieval-Augmented Generation (RAG) and modern AI pipeline architectures.
- Explored modern AI techniques used in real-world intelligent systems.
- Attended a demonstration of OpenClaw and observed its practical AI agent capabilities.
- Understood the integration of AI agents with automation and task execution systems.
- Learned about the future scope of Generative AI and intelligent autonomous systems.
- Strengthened understanding of practical industry-level AI workflows and modern AI development approaches.
