

(TR-104) PYTHON WITH AI/ML

Training Day 56 Report

Date: 30 March 2026

Topic Covered: MCP (Model Context Protocol) & Flowise AI Workflow Concepts

The fifty-sixth day of training focused on understanding MCP (Model Context Protocol), its architecture, and the role of AI workflow orchestration systems. The training also included exploring Flowise AI for visual workflow creation and studying how AI models interact with external tools and systems.

- Learned the fundamentals of MCP (Model Context Protocol).
- Understood MCP as a standard protocol for connecting AI models with external tools and services.
- Explored the core components of MCP including Host, Client, and Server.
- Understood how MCP enables structured communication between AI models and external systems.
- Explored Flowise AI as a visual workflow builder for LLM-based applications.
- Learned how nodes are connected to create AI pipelines visually.
- Studied workflow structures involving prompts, chains, memory, and agents.
- Observed how Flowise simplifies development of RAG and agent-based systems with minimal coding.
- Revised concepts related to AI workflow orchestration and modular pipeline design.
- Worked on presentation preparation and documentation of workflow-related concepts.
- Strengthened understanding of modern AI workflow systems and tool integration approaches used in real-world AI applications.
