

(TR-104) PYTHON WITH AI/ML

Training Day 7 Report

Date: 20 January 2026

Topic Covered: Conditional Statements, Loops & Python Mini Projects

The seventh day of training focused on practicing conditional statements, loops, and Python mini projects through problem-solving tasks and programming exercises.

- Practiced conditional statements by implementing programs such as Age Checker, Number Classifier, Grade Calculator, and Leap Year Checker.
- Worked on decision-making concepts using if, elif, and else statements for different logical conditions.
- Practiced loop concepts using programs such as Even Number Finder, Vowel Skipper, Positive Sum, and Nested Loop with break statements.
- Learned the use of for loops, continue statements, and break statements in different programming scenarios.
- Completed a Guessing Game project with multiple difficulty levels, limited guesses, and play-again functionality using loops and conditional statements.
- Developed an ATM Menu Card program to practice menu-driven programming concepts and user interaction handling.
- Improved logical thinking and problem-solving skills through hands-on Python programming exercises.
- **GitHub Link for the Tasks:**
https://github.com/JaspinderKaurWalia26/Python_Practice_Codes/tree/main/20-01-2026

Overall, the session helped in strengthening understanding of conditional statements, loops, logical operations, and basic Python project development.
