

# **(TR-104) PYTHON WITH AI/ML**

## **Training Day 104 Report**

**Date: 4 June 2026**

### **Topic Covered: College Project Revision, AI Pipeline Analysis & AI Assistant Testing**

The hundred and fourth day of training focused on revising major concepts used in the IntelliClass project, reviewing AI-based attendance and voice recognition workflows, and testing the AI Assistant module to validate its functionality and response generation capabilities.

- Revised concepts and modules implemented in the IntelliClass project to strengthen understanding of the overall system.
- Reviewed the AI Attendance Pipeline, including image processing, face recognition, attendance marking, and database update workflows.
- Revisited the AI Voice Pipeline and analyzed its implementation flow for speaker identification and voice-based authentication.
- Studied the overall project architecture and interactions between frontend, backend, database, and AI modules.
- Tested the AI Assistant module using multiple types of user queries.
- Verified response generation and evaluated the accuracy of outputs produced by the assistant.
- Reviewed assistant behavior across different query scenarios to ensure consistent performance.
- Observed system functionality and overall performance during testing activities.
- Analyzed query handling mechanisms and response generation workflows within the AI Assistant module.
- Revised concepts related to AI attendance processing, voice recognition systems, conversational AI assistants, and integrated project architecture.

Overall, the training enhanced understanding of AI-based attendance systems, voice recognition workflows, project architecture, and AI Assistant testing and validation processes.
