

(TR-104) PYTHON WITH AI/ML

Training Day 90 Report

Date: 15 May 2026

Topic Covered: Daily Diary Documentation, Training Report Management & Academic Record Organization

The ninetieth day of training focused on preparing internship documentation, organizing training records, managing daily diary reports, and reviewing previously completed learning activities for academic submission.

- Reviewed previously completed training reports and internship activities for daily diary preparation.
- Compiled historical training tasks, project work, and learning records for documentation purposes.
- Prepared day-wise content for Python with AI/ML training documentation.
- Organized internship activities and project contributions in a structured reporting format.
- Verified formatting consistency, content flow, and documentation quality across reports.
- Reviewed GitHub references and supporting learning resources associated with training activities.
- Managed week-wise and day-wise training report organization.
- Added daily diary records and project references into the documentation workflow.
- Reviewed navigation and accessibility of training records and related documents.
- Examined document viewing, report handling, and record management processes.
- Improved the presentation and organization of training records for easier access and review.
- Evaluated the overall workflow for training report and daily diary management.
- Deployed the training report and daily diary management workflow for accessibility and documentation review.

- Revised previously learned Python and AI/ML concepts and implementation practices.
- Reviewed earlier project tasks, exercises, and technical learning outcomes.
- Organized project learning records and internship achievements for academic documentation.
- Refined documentation content and formatting for submission readiness.
- Revised concepts related to internship documentation, report management, record organization, content structuring, and academic reporting workflows.

Overall, the training enhanced understanding of technical documentation preparation, training record management, structured reporting practices, and academic project documentation workflows.
