

(TR-104) PYTHON WITH AI/ML

Training Day 94 Report

Date: 21 May 2026

Topic Covered: Daily Diary Documentation, Training Report Management & Project Concept Revision

The ninety-fourth day of training focused on preparing internship documentation for college submission, organizing daily diary records, updating the training report website, and revising previously implemented project concepts and technologies.

- Prepared the complete daily diary documentation covering the entire training period for college submission.
- Reviewed previously prepared reports and ensured consistency in formatting, headings, and content structure.
- Organized tasks, project work, and learning outcomes according to their respective training dates.
- Corrected formatting issues, refined content presentation, and improved overall documentation quality.
- Standardized all training records into a uniform format suitable for academic submission.
- Verified that each daily entry accurately reflects the work performed, tools used, and concepts learned.
- Updated the TR-104 Training Report website by adding daily diary PDF records for multiple training days.
- Maintained consistent file organization and document linking structure within the training portal.
- Reviewed project implementation records and revised previously covered concepts related to AI/ML development.
- Revisited concepts including NLP, RAG, LangChain, AI Agents, FastAPI, Streamlit, MCP, Vector Databases, and Retrieval-Augmented Generation workflows.
- Reviewed project architecture, backend workflows, frontend integration, and AI system design concepts.

- Strengthened understanding of how different project modules interact within complete AI-powered applications.
- Revised concepts related to technical documentation, project reporting, AI/ML workflows, system architecture, and academic record management.

Overall, the training enhanced understanding of professional documentation practices, project record management, concept revision, and structured presentation of technical work for academic and industry purposes.
