Training Day 96 Report

Date: 25 May 2026

Topic Covered: IntelliClass Synopsis Documentation, LaTeX Report Preparation & Mid-Term Training Report Work

The ninety-sixth day of training focused on preparing academic documentation for the IntelliClass AI-Powered Smart Attendance & Intelligent Assistance System, working on LaTeX-based synopsis report creation, and initiating Mid-Term Training Report preparation for college submission.

- Worked on project synopsis documentation for the IntelliClass AI-Powered Smart Attendance & Intelligent Assistance System for college submission.
- Structured and organized synopsis content including Introduction, Rationale, Objectives, Literature Review, Feasibility Study, Methodology, Expected Outcomes, and References.
- Prepared the complete synopsis report using LaTeX for professional academic formatting and structured presentation.
- Designed title page, table of contents, section hierarchy, and standardized academic report structure in LaTeX.
- Improved document alignment, spacing consistency, heading formatting, and overall presentation quality.
- Added technical descriptions related to AI-based attendance automation, face recognition, voice biometrics, and RAG-based intelligent learning assistance.
- Organized literature review references and research citations in proper academic format.
- Worked on formatting workflow diagrams, structured layouts, and report content organization for submission readiness.
- Verified document consistency and ensured proper formatting across all pages for final submission preparation.
- Started initial preparation for the Mid-Term Training Report of the IntelliClass project.

- Planned documentation structure for major chapters including Introduction, Objectives, System Requirements, and Software Requirement Analysis.
- Reviewed IntelliClass project functionalities including AI attendance system, face recognition, voice biometrics, QR-based enrollment, and AI assistant modules for report inclusion.
- Organized content flow to ensure proper technical representation of all system components in the report.
- Revised concepts related to academic documentation, LaTeX report writing, project synopsis structuring, and AI-based system documentation.

Overall, the training enhanced understanding of professional academic documentation, LaTeX-based report preparation, structured technical writing, and systematic project reporting for AI-based systems.
