

(TR-104) PYTHON WITH AI/ML

Training Day 97 Report

Date: 26 May 2026

Topic Covered: Mid-Term Training Report Documentation, System Design, Testing Modules & Diagram Preparation

The ninety-seventh day of training focused on completing major sections of the IntelliClass Mid-Term Training Report, including system design documentation, requirement analysis, testing strategies, and diagram preparation for academic submission.

- Worked on Chapter 1 (Introduction) of the IntelliClass Mid-Term Training Report, including system overview, objectives, architecture overview, technologies used, functional modules, and project scope.
- Prepared Chapter 2 (System Requirements), covering hardware requirements, software requirements, cloud services, and deployment environment specifications.
- Developed Chapter 3 (Software Requirement Analysis) including problem definition and detailed explanation of system modules and functionalities.
- Prepared Chapter 5 (Software Design) documentation, including activity diagrams, face recognition pipeline flowcharts, voice recognition pipeline flowcharts, and database design descriptions.
- Created and refined system diagrams and flowcharts using Draw.io for professional documentation and visualization.
- Researched tools and platforms for designing architecture diagrams, ER diagrams, and system flowcharts for improved report presentation.
- Designed ER diagrams representing database structure, relationships, and attendance management workflows.
- Worked on Chapter 6 (Testing Module), including testing methodologies, test cases, and validation strategies for system modules.
- Prepared Chapter 7 (Project Performance So Far), documenting completed modules, pending tasks, and overall development progress.
- Organized documentation flow to ensure clarity, readability, and academic submission readiness.

- Revised concepts related to software documentation, system design, UML diagrams, ER diagrams, testing methodologies, and AI-based system structuring.

Overall, the training enhanced understanding of technical report writing, system design documentation, diagrammatic representation, testing strategies, and structured academic project development.
