

(TR-104) PYTHON WITH AI/ML

Training Day 99 Report

Date: 28 May 2026

Topic Covered: Final Training Report Documentation, System Structuring & Academic Content Refinement

The ninety-ninth day of training focused on preparing and refining the final IntelliClass project report, organizing detailed technical documentation, and ensuring alignment with official college submission standards.

- Worked on preparing and organizing the final IntelliClass project report according to the official college report structure.
- Developed and refined detailed documentation across multiple chapters including Introduction, Requirement Analysis, System Design, and Implementation.
- Structured comprehensive project explanations covering biometric attendance pipelines, AI assistant modules, database architecture, and deployment workflows.
- Prepared detailed module-wise descriptions, functional requirements, feasibility study, SDLC model explanation, and methodology sections.
- Organized technical content related to face recognition, voice biometrics, RAG pipeline, AI attendance assistant, and database design.
- Improved formatting consistency across headings, tables, sections, subsections, and technical documentation throughout the report.
- Updated implementation details, algorithms, pseudocode sections, and technology stack explanations for proper academic presentation.
- Reviewed overall report alignment, structure flow, and documentation quality for final submission readiness.
- Ensured consistency in technical writing style and improved clarity across all project documentation sections.
- Revised concepts related to technical report writing, AI system documentation, biometric verification workflows, RAG-based architectures, SDLC modeling, and structured academic presentation.

Overall, the training enhanced understanding of professional technical documentation, system design structuring, AI-based application reporting, and academic project presentation standards.
